- API Technologies:** REST API
- Security Technologies:** JWT & Oauth2 Authentication
- AI Coding Technologies:** Claude Code, Antigravity, Cursor, GitHub Copilot.

EXPERIENCES

Web Developer Freelance August 2026 - Present

Key responsibilities:

- Engineered robust backend solutions for enterprise business intelligence systems across diverse sectors using Java and the Spring Boot framework.
- Architected scalable server-side logic and relational database structures with PostgreSQL to securely manage enterprise data across production environments.
- Integrated Spring Security with JWT to establish secure, stateless authentication flows and role-based access control for system administrators.
- Designed and documented standardized RESTful API endpoints using OpenAPI/Swagger to ensure seamless contract integration with frontend teams and external clients.

PROJECT

Royal Elegance — Hotel Booking Website - github.com/filipchhan7-sketch/royal-elegance 2025

Next.js, PostgreSQL, Stripe Integration

- Architected** fully responsive, multi-page luxury hotel booking website from wireframe to production.
- Implemented** reusable Next.js components with dynamic routing, Supabase API, and Stripe payments.

Plant Lab Laboratory - github.com/filipchhan7-sketch/Plant-Lab-Laboratory 2026

Laravel, React.js, MySQL

- Architected** A full-stack CRUD Internal Lab system for managing and digitising plant laboratory records.
- Implemented** REST API with MySQL database, JWT authentication, role-based access, search and filtering.
